

AyurCentral Enterprise HRMS - HR User Manual

Who this is for: HR and Admin staff who use the web app every day.
What this covers: Screens, buttons, and step-by-step tasks only (no technical setup).
Last updated: September 2026.

1. Getting started

1.1 Opening the app

- 1. Open the **AyurCentral HRMS** link your IT team shared (it runs in the browser, usually via Google).
- 2. Sign in with your **company Google account** (the same email that was added as an HR/Admin user).
- 3. If you see “not authorized,” your email is not linked to an active user record - contact your system owner.

1.2 Layout you will see every day

Area	What it does
Left sidebar	Main menu. Sections can be expanded or collapsed.
Top bar	Page title, notifications (bell), your name and role, Sign out .
Main page	Forms, tables, and action buttons for the task you chose.
Ask HR (chat bubble, bottom right)	Quick help about using HRMS (not a substitute for payroll decisions).

After you sign in, use a **hard refresh** (Ctrl+Shift+R or Cmd+Shift+R) if the screen looks old or buttons are missing.

1.3 Roles (what HR usually needs to know)

Role	Typical use
ADMIN / OWNER	Everything HR can do, plus Settings , user access, and sensitive configuration.
HR	Employees, leave, attendance, payroll, recruitment, notifications.
MANAGER	Team list, leave approvals - no payroll or salary screens .
EMPLOYEE	Own profile, own leave, own payslips only.

The menu only shows items your role is allowed to see. If something is missing, an Admin can adjust **Settings** → **HRMS module access by role** (then you refresh the page).

2. Dashboard

Menu: Main → **Dashboard**

The dashboard answers: *“What needs attention today?”*

For HR/Admin you will typically see:

- Count of **active employees**
- Who is **on leave today**
- **Pending leave** waiting for approval
- **Payroll status** for the current month (if a run exists)
- **Alerts** (for example missing bank details, missing salary structure, failed emails)
- **Recent activity** (audit-style list of important actions)

Quick actions (when shown): jump to leave approvals, payroll, add employee, or apply leave - depending on your role.

3. My Work (your own record)

These items appear for most users; HR uses them for their own employment data too.

3.1 My Profile

View and update **your** contact details where the app allows self-edit (phone, address). Payroll identifiers and employment fields are usually HR-only on other people's profiles.

3.2 My Leave

- See **leave balances** for the current leave year.

- See your **requests** (draft, submitted, approved, rejected).
- Use **Apply leave** (or the link from here) to submit a new request.

3.3 My Payslips

- Lists **locked** payslips for **you only**.
- **Download** or view after payroll has been finalized for that month.
- If empty, payroll for your employee ID may not be finalized yet.

4. People

4.1 Employees (directory)

Menu: People → **Employees**

Task	Steps
Find someone	Use search and filters; click a row to open the profile.
Add employee	Add employee → fill required fields → Save . Employee ID is assigned automatically on save.
View / edit profile	Open the employee → use tabs (Personal, Employment, Payroll IDs, Leave, Documents, etc.).
Deactivate	On profile → change status to inactive when someone leaves. They will not appear on new payroll drafts; old locked payroll is unchanged.

Tip: Before monthly payroll, make sure each active employee has **salary structure, bank details,** and **PAN** where your process requires them. The payroll screen will flag missing items.

4.2 Mandatory fields

Menu: People → **Mandatory fields**

- Choose which fields are **required** when creating employees or using bulk upload.
- Save after changes.
- Use this to match your company's onboarding checklist.

4.3 My Team (managers only)

Managers see **direct reports** only - no salary. HR uses **Employees** for the full directory.

5. Time off (leave)

5.1 Leave (company view) - HR

Menu: Time Off → **Leave**

- See **all employees'** leave requests (by status).
- **Configure leave types** and policies your company uses (names and rules are set here, not hard-coded).
- HR can act on behalf of employees when your process allows (actions are logged).

5.2 Leave approvals

Menu: Time Off → **Leave Approvals**

- Lists requests in **Submitted** state.
- Open a request → **Approve** or **Reject** (with reason if needed).
- Managers see **team only**; HR/Admin can see broader queues.

5.3 How leave connects to payroll (what HR should do)

- Approved leave may suggest **LOP (loss of pay)** on open payroll months.
- On payroll screens you can **refresh leave LOP** or **apply leave LOP to days** (see Payroll section).
- **Locked** payroll months are never changed by new leave - use a **correction run** if needed.

5.4 Leave calendar

Shows approved leave in a calendar view (scope depends on role).

6. Attendance

Attendance in HRMS means **working days, paid days, and LOP** for payroll - not a biometric device link.

6.1 Register (attendance upload)

Menu: Attendance → **Register**

This is **step 2** of the monthly payroll path (see section 7).

Task	Steps
Pick month	Use the period card (year, month, vertical).
Start payroll for the month	If no run exists: Start selected vertical or Start all verticals .
Upload register	Download the attendance template for the run → fill in Excel/CSV → Validate → Confirm import .
Edit one employee	Use the table on the same page to enter or fix working days, paid days, LOP.
Save	Save days & extras before leaving the page if you edited manually.

Vertical: Choose **SAPL**, **AOPL**, **AOMS**, or **Combined (legacy payroll)**.

- **Combined (legacy)** = older single payroll run for the whole company (PR-YYYY-MM).
- **Per vertical** = separate run per company vertical (PR-YYYY-MM-SAPL , etc.).

If attendance was entered on an **older combined** run but you opened an empty **vertical** run, use the yellow banner: **Import from combined payroll** or **Open combined payroll**.

6.2 Form T

Menu: Attendance → **Form T**

- Statutory **Form T** Excel export for a chosen **payroll month** and **vertical**.
- Use after attendance/payroll data exists for that period.

7. Payroll (monthly salary run)

Payroll is a **three-step path** shown at the top of salary-related pages:

1. **Salary structure** - employee packages (CTC / components).
2. **Attendance** - working days and LOP for the month.
3. **Payroll** - calculate net pay, review, finalize, payslips.

Use the **pipeline buttons** (1 → 2 → 3) to move between steps without losing the selected month.

7.1 Salary structure

Menu: Payroll → **Salary structure**

Task	Steps
Bulk update	Use bulk upload (Excel/CSV template) for many employees.
One employee	Search employee → open editor → enter components → Save .
Revision	When salary changes, create a revision (history is kept; old amounts are not overwritten).

Employees must have a **current** structure effective for the payroll month before calculate will succeed.

7.2 Salary Statement

Menu: Payroll → **Salary Statement**

- Monthly **cost-to-company / salary breakdown** report from structures (for HR review, not the same as payslip PDF).
- Filter by period and export/download as provided on screen.

7.3 Payroll - main run screen

Menu: Payroll → **Payroll**

A. Choose period and run

1. Set **year** and **month**.
2. Set **vertical**: - **Combined (legacy payroll)** - use for months that were always run as one company-wide payroll. - **SAPL / AOPL / AOMS** - use when you run payroll separately per vertical.
3. If several runs exist for the same month, use **Runs this month** dropdown or **All payroll runs** at the bottom → **Open** the correct run ID.

Run status labels you will see:

Status	Meaning for HR
Draft	You can edit attendance inputs; not finalized.
Calculated	Net pay computed; you can recalculate if inputs change.
In review / Approved	Optional review steps if your process uses them.
Locked / Finalized	Month is closed; payslips generated; use correction run to fix.

B. KPI row

Shows employee count, gross, deductions, net (after calculate), and LOP summary.

C. Step 2 - Calculate payroll

1. Fix any **attendance incomplete** warning (all employees need valid working/paid/LOP days).
2. Click **Calculate payroll** (or **Recalculate**).
3. Review the employee table: amounts, warnings, exceptions.

Important: You cannot **Finalize** while status is still **Draft** and calculate has not been run. Use ↑ **Go to Calculate payroll** from the finalize section if you are at the bottom of the page.

D. Payroll check (exceptions)

The app lists employees who need attention, for example:

- Missing salary structure
- Missing bank or PAN
- Working days zero
- Negative net pay

Use **Fix** links to jump to salary structure or employee profile where offered.

E. Review and approve (if shown)

Follow on-screen steps if your organization uses formal review before lock.

F. Finalize payroll

- When checks pass and status is past draft, click **Finalize payroll**.
- Finalizing **locks** amounts for that run (they cannot be casually edited).

G. Payslips

After finalize:

- Payslip files are generated per employee with a record.
- Use regenerate options in **More actions** if a payslip failed.
- Employees see their own copies under **My Payslips**.

H. Correction run (after lock)

If a **locked** month was wrong:

1. Open that locked run.
2. **More actions** → **Create correction run**.
3. A new **draft** opens for the **same month and vertical**; original locked run stays as history.
4. Repeat attendance → calculate → finalize on the correction run.

I. More actions (advanced)

Button	When to use
Import attendance from combined payroll	Vertical run is empty but old combined run has days.
Refresh leave LOP	Pull latest approved leave LOP suggestions.
Apply leave LOP to days	Copy leave LOP into LOP days and recompute paid days (then recalculate).
Return to draft	Undo review state so you can edit inputs (rules depend on status).
Create correction run	Only from a locked run.

J. All payroll runs

At the bottom, expand **All payroll runs** to open **any** month/run (including the current month). The row marked **Current** is the run you are viewing.

8. Recruitment (ATS)

Menu: Recruitment → **Recruitment / Jobs / Candidates**

8.1 Jobs

- Create a job → **Publish** when ready (creates the public careers link).
- Edit title, description, location, etc. on **Edit job**.

8.2 Candidates and pipeline

- Candidates apply via the public link or are added manually.
- Move stages: Applied → Screening → ... → Offer → **Hired**.

8.3 When a candidate is Hired

On the hired application you will typically:

1. Enter **compensation** (salary breakup for letters).
2. Set **joining date** (needed for appointment letter).
3. **Send offer letter** (email with PDF).
4. **Send appointment letter** (after joining date is set).
5. **Create employee** - opens a form with a **new employee ID**; completes onboarding into the employee directory.

Do steps in the order your HR policy requires; the screen hints remind you about joining date before appointment letter.

9. Notifications

Menu: System → **Notifications**

- **Inbox** - messages and links to related screens.
- **Email log** (HR) - whether system emails were sent, failed, or skipped.
- **Preferences** - where available, control how you receive alerts.

10. Settings (Admin / Owner)

Menu: System → **Settings**

Section	Purpose
Welcome messaging	How welcome emails behave.
Email & welcome toggles	Turn categories of system email on or off.
Content & document templates	Edit email subject/body text for letters and notifications. PDF layouts are listed for reference; layout changes need IT.
HRMS module access by role	Which sidebar modules each role sees.
New login defaults	Default self-service flags when a login is created.

Click **Save settings** after changes. Users should **refresh** the browser to see menu changes.

Users (Admin): role assignment screen - may show “coming soon” depending on deployment; user mapping is often done in the master spreadsheet by IT.

11. Monthly payroll checklist (recommended)

Use this every month:

1. ☐ New joiners: employee record + salary structure + bank/PAN.
2. ☐ Leavers: mark **inactive** (after last working day process).
3. ☐ Leave: clear pending approvals that affect the month.
4. ☐ **Salary structure** - revisions effective for this month are in place.
5. ☐ **Attendance / Register** - upload or enter days for the correct **vertical** (or combined legacy).
6. ☐ **Payroll - Calculate** → fix exceptions → **Finalize**.
7. ☐ **Payslips** - confirm generated; spot-check a few employees.

8. [] **Salary Statement / Form T** - export if your compliance calendar needs them.

12. Common problems (quick fixes)

Problem	What to try
Finalize button disabled	Scroll up → Calculate payroll first; fix attendance incomplete banner.
No employees on payroll	Wrong run or vertical - open Combined (legacy) or Import from combined payroll .
"Attendance incomplete"	Every row needs working days > 0 and valid paid/LOP; finish register upload.
Missing structure / bank on check list	Open employee → salary structure or payroll tab.
Old month was wrong after finalize	Create correction run from locked run (do not edit locked month).
Menu item missing	Admin: Settings → module access ; then hard refresh.
Screen looks outdated	Hard refresh; confirm IT deployed latest web app version.

13. Getting help

- **Ask HR chat:** usage questions inside the app.
- **IT / system owner:** login issues, deployment, spreadsheet access, new users.
- **Accounts:** statutory interpretation, TDS amounts, PF/ESI policy - amounts you enter must match your company's rules.

AyurCentral Enterprise HRMS - HR User Manual. For internal training and operations.
